- Owner Organization should be used if the citation is issued to an organization
- · Owner Person is only used if they are distinct from the subject
- An Owner Organization may be issued a citation directly or may be used as the owner of a vehicle that was driven by a subject
- The arresting officer and the citing officer will often be the same person
- The total bail amount is derived based on the bail indicated for each individual charge.

4.2. Process:

In March, 2004 the COSCA/NACM Joint Technology Committee was asked to choose from a list of common justice communications generated as part of SEARH Group's JIEM project and rank the most commonly used court forms and communications. The top four selections were citation, protection order, sentence, and warrant documents. These are the most common forms and therefore, the most common communication data exchanges that are made by courts on a daily basis.

The first step in the creation of reference documents was to solicit court forms and electronic data exchanges from State Court IT Directors. In the late May, early June time period an updated listing of State Court IT Directors was completed and e-mail solicitations sent to ask for traffic and misdemeanor citation and domestic violence protection order. The following states sent information for sentencing documents:

- · Alabama
- Maine
- Michigan
- · Ohio
- South Carolina
- · Texas
- · Washington
- Wisconsin

Once the forms and other data transmission source documents were collected, both NCSC and contract staff extracted the data elements from the forms and organized them by state and then grouped them by like element. After performing the first analysis, and based on input from the OASIS/LegalXML meeting in Denver it was determined that it would benefit all to create a data relationship model so as to better understand the grouping and thereby subsequently assigning a more accurate GJXDM data element.

A key element of the project was to:

"Establish a Court Joint Standards Development (JSD) Team to review and refine identified efforts to identify and label the court elements in current, proposed, and developing standards"

A JSD meetings was held for Traffic Citations in Atlanta, Georgia on June 16, 2004.

During the meetings participants were asked to review the proposed data groupings, the need for the element, the need for additional elements, and finally and most importantly, the GJXDM data element mapping if there was one and if not, to define and associate a new extension element.

Following the JSD meetings URL Integration, a sub-contractor to the NCSC used their excellent data mapping and organization software to develop a draft version of the reference documents for each area.

The draft versions were then placed for open review by the justice community on an Internet computer bulletin board system located at:
